

Orlando Science Elementary

Competition Math

Strengthen your analytical and problem-solving skills in this challenging program designed for students who want to learn math at its highest level. Students learn problem-solving strategies for becoming a more efficient problem solver and a stronger competitor. They will practice these strategies through lessons, sample problems, mini competitions, and local, state, and even national competitions. Timed assessments will also help you build experience for real competitions, and weekly synchronous strategy sessions with an instructor will guide you and your classmates through competition tactics. Please note most competitions are on the weekends and require some travel.
